Objective

Aspiring Software Engineer driven by an insatiable intellectual curiosity and a passion for experimenting with new technologies like AI. Eager to take on challenges, explore unconventional approaches, and co-create innovative, user-centric products. Dedicated to bridging the gap between scalable machine learning systems and seamless full-stack user experiences.

Education

Dwarkadas J. Sanghvi College of Engineering (DJSCE)
B.Tech in Artificial Intelligence & Machine Learning (AIML)

Mumbai, India
2024 – 2028 (Expected)

Skills & Languages

Programming & Databases: C, C++, Python, SQLite, PostgreSQL

Data & ML: Pandas, Plotly, Jupyter, Scikit-Learn, XGBoost, EDA, Predictive Modeling, AI Co-creation

Web & Cloud Tools: Next.js, Supabase, Git

Spoken Languages: English (Fluent), Japanese (Preparing for N1), Hindi (Fluent), Bengali (Fluent), Gujarati (Listening Comprehension), Marathi (Listening Comprehension)

Technical Projects

Spotify ML Pipeline & Data Engineering | *Python, Pandas, PostgreSQL, XGBoost, Scikit-Learn*

- **Cut memory usage by 79% (from 277MB to 58MB)** by building a data pipeline that compresses raw streaming logs into a database.
- **Created a tool that automatically generates over 60 interactive charts** to instantly show user listening habits without needing any manual setup.
- **Tracked short-term user habits to help the system quickly adapt** when the number of skipped songs suddenly dropped from **31%** to **4%**.
- **Trained a predictive model to identify user skips**, adjusting the system to handle uneven data so it wouldn't just blindly guess "no".
- **Improved the model's ability to catch skipped songs** by strictly testing it on future timelines, ensuring the system wasn't cheating by looking at past data.
- **Extracted hidden listening patterns by creating over 40 custom data points** from raw timestamps, such as tracking exactly what time of day a user usually skips songs.

Otakufy | Full-Stack Japanese Learning Platform | *Next.js, React, Tailwind CSS, Supabase, Vercel*

Live: otakufy.vercel.app

- **Delivered lightning-fast quiz load times for all 5 JLPT levels** by building a web app that pre-loads vocabulary data instead of fetching it live.
- **Built a highly responsive, mobile-like user experience** by integrating a custom flashcard quiz engine directly into the frontend.
- **Drove user engagement through daily streaks and leaderboards** by adding secure logins and real-time progress tracking.
- **Rapidly built the entire website from scratch** by directing AI coding assistants based on clear, human-driven instructions.
- **Ensured a seamless experience across all devices** by designing a mobile-first layout that automatically scales perfectly to tablets and desktop screens.

Personal Portfolio & Interactive Resume | *React 19, Tailwind CSS v4, Vite, Framer Motion, i18n*

Live: indraneelsamanta.vercel.app

- **Built a fast, responsive personal website using modern tools** with smooth scrolling animations to showcase project work.
- **Added an instant English-to-Japanese translation switch and a custom dark mode theme** to make the site easy to read for recruiters in Japan.
- **Set up a working contact form with built-in spam protection** while keeping the underlying code clean and error-free.
- **Automated the website publishing process** so that any new code updates were instantly and seamlessly pushed to the live site without manual work.

Experience

Logistics & Events Co-committee | *Google Developer Student Club (GDSC) DJSCE*

Oct 2025 – Present

- **Led a 5-member team to coordinate end-to-end event logistics, attendee comfort, and thorough post-event operations for 350+ attendees** during collegiate hackathons, demonstrating strong leadership capabilities.
- **Reached out to sponsors and participants** through email campaigns and direct calls to boost event sign-ups.
